

## Polypropylene sink

The collection includes a wide range of polypropylene sinks. The standard sizes are shown in the table below.

- Polypropylene has excellent properties as a laboratory sink.
- In addition to being resistant to chemicals, the softness of a polypropylene sink may help prevent items kept in it from being broken. For more information about the properties of polypropylene, see [worktop materials](#).
- A polypropylene sink can be installed from below on a polypropylene or solid laminate worktops and thereby not creating an edge around it that can make cleaning more difficult.
- If necessary, a polypropylene sink can also be installed from above on a chipboard-based worktop.
- An overflow valve is available as an accessory by order.
- Tailored dimensions are also available.
- If you are unsure about the suitability of the material, please contact our experts for more information.

### Product information

Description	Product code and standard dimensions width-depth-height [mm] (depth measure horizontally)	Sink color
Polypropylene sink	PPA-345-245-210	Black
	PPA-458-307-230	Black, white
	PPA-503-300-230	Black
	PPA-500-400-250	Black
	PPA-750-412-320	Black
	PPKA-238-94-185 (dripcup)	Black

Sinks are also available in custom sizes.
