Polypropylene sink

The collection includes a wide range of polypropylene sinks. The standard sizes are shown in the table below.

- Polypropylene has excellent properties as a laboratory sink.
- In addition to being resistant to chemicals, the softness of a polypropylene sink may help prevent items kept in it from being broken. For more information about the properties of polypropylene, see worktop materials.
- A polypropylene sink can be installed from below on a polypropylene or solid laminate worktops and thereby not creating an edge around it that can make cleaning more difficult.
- If necessary, a polypropylene sink can also be installed from above on a chipboard-based worktop.
- An overflow valve is available as an accessory by order.
- Tailored dimensions are also available.
- If you are unsure about the suitability of the material, please contact our experts for more information.

Product information

Description	**Product code**	**Standard dimensions, inner dimensions [mm]**			**Sink colour**
		Width	**Depth** (note: depth is horizontal)	**Height**	
Polypropylene sink	PPA	320	320	200	Black
