ASECOS safety cabinets

Chemical and fire safety cabinets

In our selection of high-quality Asecos safety cabinets, we offer chemical, fire safety, and combination cabinets in various sizes and with different equipment options. Asecos fire safety cabinets are equipped with wheels or a transport base, which makes them easy to move.

The VISULab standard range consists of both under-bench and free-standing Asecos fire safety cabinets for the safe storage of flammable liquids. The interior fittings include shelves or pull-out drawers. All cabinets are type-tested according to EN 14470-1 and have a 90-minute fire resistance rating, helping to prevent or slow down the spread of fire. The cabinets also comply with DIN EN 16121/16122 furniture standards and EU occupational safety requirements (GS-certified, CE-marked).

- The **EAUB** series consists of three drawer-type cabinets designed to fit under a workbench or fume cupboard.
- The **EAQH** series includes tall cabinets, each equipped with three shelves, a perforated insert, and a spill tray.
- The **EAQL** series features tall cabinets with four pull-out drawers.
- The **EAK-1200** is a tall, three-door combination cabinet with a fire safety compartment on the left and two stacked cabinets on the right, ideal for storing acids and alkalis.

The German manufacturer’s extensive product range includes numerous options and accessories.
