## Pharmacy cabinet

- A pharmacy cabinet is a storage solution that saves space.
- The cabinet has a mechanism that pulls the drawers out as the door is opened.
- The mechanism is very handy if the cabinet is placed between two workstations or next to a fume hood, because all items in it can be accessed from either side.
- A ventilated cabinet suitable for storing chemicals is found in the table under the name of reagent cabinet.
- Materials, handles and mechanisms are selected according to the quality category (Basic, Pro or Premium). Our experts will help you choose the right quality category. Read more about the quality categories [here](#).
- A pharmacy cabinet can also be made in tailored sizes. By special order, you can also have boxes and mechanisms with no metal parts.
