Stainless steel
shelf system

Visu Clean stainless steel shelf system

A patented
Finnish
innovation

Visu Clean is a 100% Finnish patented innovation. At the same time, the system is durable, easy to use and has excellent cleanability. In addition, it is completely steplessly height-adjustable.

Quick installation and easy to modify

The shelves are attached to the brackets without screws and separate parts, which allows the shelves to be adjusted to the desired height quickly and effortlessly. The vertical rail is installed with the back side against the wall, making the attachment stronger and leaving no holes that are difficult to clean.

Shelves and brackets are easy to remove and clean the way you like.

Stage 1

Stage 2

Stage 3

Stage 4

Stage 5

Several applications

Thanks to its cleanability and versatility, the system is ideal for e.g. healthcare, laboratories, cleanrooms and refrigerated storages. All parts of the system are made of stainless steel and cleanability is taken into account also in the clear design of the product.

Perforated and electrolytically polished shelves available

Electrolytic polishing is a chemical process that smooths out microscopic irregularities of the surface, making the cleaning even more easier. Perforated shelves allow air to circulate through the shelves.

A 10-year warranty

Wall rails:

- 500 mm
- 1000 mm
- 1500 mm
- 2000 mm

Brackets:

- 200 mm
- 300 mm
- 400 mm
- 500 mm

Shelf boards

(depth x length in mm)

- 200x1000
- 200x1250
- 200x1500
- 200x2000
- 300x1000
- 300x1250
- 300x1500
- 300x2000

VISU Clean shelf system includes stainless steel rails, brackets and shelf boards.

The load-carrying capacity of the shelf is 120 kg/linear metre (the spacing between the brackets is 1000 mm).

In addition to the standard sizes, the shelves can also be made completely with the dimensions chosen by the customer.
